REASONS FOR ALLOWANCE

Claims 1-18 are allowable.

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the following claimed feature: inserting stack signing software into one or more re-entrant or object-oriented code modules, producing one or more executable programs containing the inserted stack signing software and upon execution, assigning unique module identifier values to the code modules with the stack signing software, such that the stack signing software prevents module identifiers from having the same value for multiple instances of any re-entered or multiply instantiated code module and then pushing the signatures onto the processing stack, as recited in independent claims 1, 7 and 13.

The closest prior art (US 5,950,003 to Kaneshiro) teaches inserting profiling instrumentation codes during compilation of a program (col. 3, lines 51-59) wherein during execution caller-callee information is pushed into a stack area (col. 18, lines 46-65); but does not teach or suggest inserting stack signing software into one or more re-entrant or object-oriented code modules and upon execution, assigning unique module identifier values to the code modules with the stack signing software, such that the stack signing software prevents module identifiers from having the same value for multiple instances of any re-entered or multiply instantiated code module.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
